

My name is Tony Gentile and I have been employed at Carney Hospital for 2 years. I am a life long resident of Dorchester.

I have been at the Carney Emergency Department at 2:00 in the morning with my child screaming in pain from an ear ache and at 4:30 in the morning having a heart attack. The second I walked in the door I was seen immediately. This care saved my life

I have lost family here and can attest to the compassionate care all my family and I have received here.

Carney has been a mainstay for the Dorchester, South Boston and Roxbury communities. It would be unimaginable not to have Carney in this neighborhood. The hospital is an integral part of the community.

I have the good fortune of working with the staff of the ED and many other departments in the hospital. It is a privilege to work with this group of people. Day in and day out they are here for the patients they serve. They continue to amaze me.

Many of the employees live locally and many more grew up in the area. There is a pride of place that is special.

It has been wonderful to see the improvements in the hospital and the new wound care center as well as the Endocrine clinic which will allow our patients to travel a short distance to receive services they really need.

We want the hospital to continue to make improvements. We need Carney to remain a vital and thriving part of the community. This arrangement with Cerberus is important to all of us, the community, the patients, the doctors, nurses, and all the staff. Carney Hospital will continue to provide high quality care at low cost.

As part of the community, as a patient and as an employee Carney this is important to me and the health of my family.
